

# Environment Week!

**The environment can either increase or decrease risk of falls - let's support our service users to reduce this risk.**

**Please spend some time considering your service users' environment and how this could impact them - how is the lighting, the temperature, the noise? Is there adequate space available for them to do what they need to? Are there any trip hazards? Etc**

**If you require support or guidance on the next steps to address environmental concerns please discuss with your line manager, Reablement Facilitators or the Occupational Therapy team.**

**“It's inevitable that your environment will influence what you do - Duncan Sheik”**
